INCREASE EFFICIENCY WITH THE INTEGRATION PLATFORM FOR ENGINEERING AND CONSTRUCTION

Say hello to Nexus, a cloud-agnostic, blazing fast way to manage data across disparate sources

Nexus is the only integration-platform-as-a-service (IPaaS) built specifically for engineering and construction organizations.

Owners, general contractors, and subcontractors rely on a variety of tools to manage data and processes through planning, design, construction, and field operations. Many of these tools live in isolation leading to data duplication in each tool, inefficiency, and an increased risk of errors.

With Nexus, your organization manages end-to-end construction processes by integrating best-of-breed applications in one easy-to-use platform.
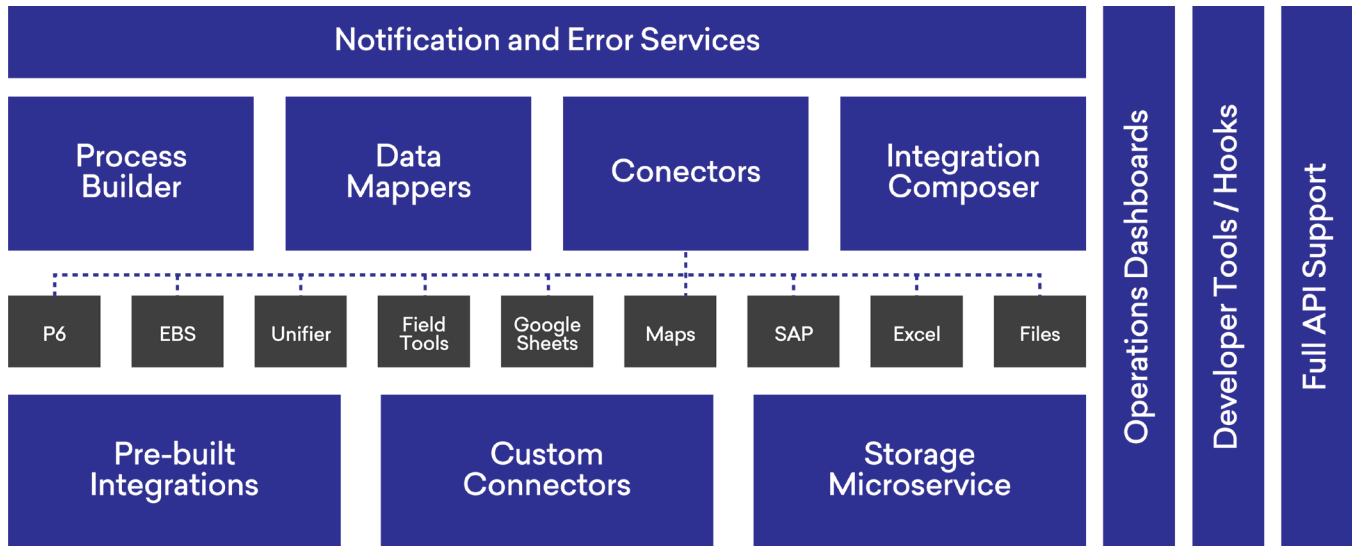

Nexus Integrates all On-Prem and Cloud Solutions

Eliminate the headaches of building and maintaining point-to-point, custom-built IT integrations to replicate design, operations, field, and finance data. Nexus keeps your organization focused on projects.

Quickly Build Tailored Work Flows

Whether you need to turn an Excel activities sheet into a Primavera P6 schedule for submission to the owner, or orchestrate a flow that will send an RFI to the owner from an issue raised in the field app, flows can quickly be created in Nexus to match your specific business needs.

NEXUS OVERVIEW

Notification and Error Services				Operations Dashboards	Developer Tools / Hooks	Full API Support
Process Builder	Data Mappers	Conectors	Integration Composer			

P6 — EBS — Unifier — Field Tools — Google Sheets — Maps — SAP — Excel — Files

Pre-built Integrations	Custom Connectors	Storage Microservice

Features

- Connectors for REST, SOAP, database, and common file formats
- Service, data mapping, looping, conditional, and script steps are available
- Add any step anywhere in the integration flow
- User-friendly data mapping
- Write JavaScript to add custom logic
- Execute integration based on schedule or through customized REST URL
- Send email notification on selected events (OnError, OnCompleted, etc.)
- Customized email notification

Benefits

- Manage all processes from one platform
- Standardize data and reporting across construction operations, finance, and supply chain
- Reduce development cycle time by 33%
- Easy to extend and scale
- Rapid time to value
- Low total cost of ownership (TCO)
- Ease of use for business users and technocrats

CONTACT US TODAY

Gaea's decades of experience with construction and engineering solutions empower us to help your organization hit the ground running quickly and accurately. We analyze your processes and implement the features that will provide unprecedented flexibility and cost savings in your business operations. Email us at sales@nexus-platform.com.
